This article has been chosen by the Editor to be of special interest or importance and is freely available online.

Editors’ commentary
171 Highlights from this issue
G N Fuller, P E M Smith

Reviews
172 The neurology of ageing: what is normal?
J M Schott
183 Contemporary management of low-grade glioma: a paradigm shift in neuro-oncology
C Hayhurst
191 Headaches complicating pregnancy and the postpartum period
M A O’Neal
203 On the road again: assessing driving ability in patients with neurological conditions
J D Handley, R H Thomas, P McKenna, T A T Hughes

Neurological rarities
207 Guanidinoacetate methyltransferase (GAMT) deficiency: a rare but treatable epilepsy
W M Stern, J S Winston, E Murphy, J H Cross, J W Sander
212 Abdominal pseudocyst: a rare complication of ventriculoperitoneal shunting
R Anwar, A-R Sadek, G Vajramani

A difficult case
214 Intracranial papillary endothelial hyperplasia (Masson’s tumour) following gamma knife radiosurgery for temporal lobe epilepsy
A W Barritt, A Merve, P Epalianage, J Aram
218 Wisdom tooth extraction causing lingual nerve and styloglossus muscle damage: a mimic of multiple cranial nerve palsies
A S Carr, M Evans, S Shah, S Catania, J D Warren, M J Gleeson, M M Reilly

How to do it
224 How to start a blog
A Thomson, D Raciborska, D Baker, G Giovannoni

Image of the moment
229 Tumefactive perivascular spaces: a rare incidental finding
A K Lahiri, P L Slaney
231 A man with hypertrophic thighs
M Huskens, G Cypers, T Tousseyn
233 Isolated hypoglossal nerve palsy due to internal carotid artery dissection
P Joshi, D Bourke

Neuroimaging
235 The first CT in a SAH: a picture tells a story
H Guerra, A Abejo, K Gobeske, E F M Wijdicks

Test yourself
237 A 50-year-old with rapid neuropsychiatric deterioration and choreiform movements
G A Mackay, S Campbell, R Jampana, J Cavanagh

Neuromythology
241 Pyramidal weakness
C M Wiles

Clinical guidelines
243 Infographic: management of back pain

Book club
244 The Selfish Gene
K Harding, A Crawshaw

Carphology
247 Carphology
A F Ben

Nanoparticle cancer treatment research. Image showing hybrid nanoparticles being used to treat a type of brain cancer (glioma) with heat. The technique uses spherical silica nanoparticles coated with gold that produce heat upon exposure to near-infrared light, enabling specific thermal destruction of cancer cells. Here, nanoshells (red) are seen travelling through the blood vessels of a human glioma grown in a mouse. This work was carried out by researchers at the Texas Center for Cancer Nanomedicine (TCCN), USA. Image produced in 2013.
