Papilloedema of the eye, ophthalmoscope image. Papilloedema is the congestion and swelling of the optic disc (upper right), the red circular region where the optic nerve enters the retina. The condition has resulted in haemorrhaging (dark areas of bleeding) from the retinal blood vessels around the optic disc. Papilloedema results from increased pressure within the skull, for instance from a cerebral tumour. It may also occur in malignant hypertension and occasionally in the later stages of chronic nephritis. Headache and nausea may occur, with short episodes of visual loss. Treatment is of the underlying cause.

Editors' commentary

- 337** Highlights of the issue
G N Fuller, P E M Smith

Editorial

- 339** Withdrawal of tracheostomy ventilation in motor neurone disease: implementing advance directives
C J McDermott, C Faull

Reviews

- 341** Pure autonomic failure
T P Brown
- 349** Imaging in acute ischaemic stroke: pearls and pitfalls
J Caldwell, M K S Heran, B McGuinness, P A Barber
- 359** What a neurologist should know about depression in Parkinson's disease
M H M Timmer, M H C T van Beek, B R Bloem, R A J Esselink
- 369** Muscle hypertrophy and pseudohypertrophy
J Walters

A difficult case

- 380** Recurrent brain ischaemia and deep vein thrombosis: the clot thickens
D Turner, M Scully, S Stone, D J Werring
- 383** Withdrawal of invasive ventilation in a patient with motor neurone disease and total locked-in syndrome
A Gleeson, F Johnson
