Papilloedema results from increased pressure within the skull, for instance blood vessels around the optic disc. Papilloedema is the congestion (dark areas of bleeding) from the retinal condition has resulted in haemorrhaging the optic nerve enters the retina. The red circular region where the optic nerve enters the retina. This has resulted in haemorrhaging (dark areas of bleeding) from the retinal blood vessels around the optic disc. Papilloedema results from increased pressure within the skull, for instance from a cerebral tumour. It may also occur in malignant hypertension and occasionally in the later stages of chronic nephritis. Headache and nausea may occur, with short episodes of visual loss. Treatment is of the underlying cause.

**Editors’ commentary**
