Imaging in acute ischaemic stroke: pearls and pitfalls
Withdrawal of tracheostomy ventilation in motor neurone disease

Treatment is of the underlying cause.

Papilloedema results from increased pressure within the skull, for instance from a cerebral tumour. It may also occur in malignant hypertension and occasionally in the later stages of chronic nephritis. Headache and nausea may occur, with short episodes of visual loss. Treatment is of the underlying cause.

A difficult case

Recurrent brain ischaemia and deep vein thrombosis: the clot thickens
Withdrawal of invasive ventilation in a patient with motor neurone disease and total locked-in syndrome
Eastern equine encephalitis

Muscle hypertrophy and pseudohypertrophy
